**W**ith more than 30 years of experience practicing podiatric medicine and surgery, Dr. Robert G. Parker was the first board-certified podiatric surgeon in Houston by the American Board of Podiatric Surgery and is one of the most skilled and extensively trained podiatrists in the Houston area. A devoted physician, Dr. Parker treats most common foot disorders and has brought many advanced procedures to Houston over the years. Some of the most common conditions he treats are bunions.

In addition to this, Dr.

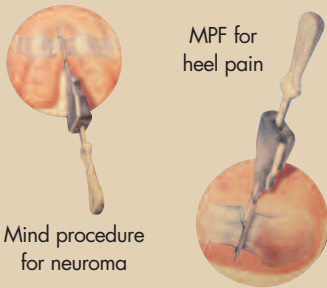

Parker uses the most up-to-date techniques, instrumentation and equipment for diagnosing and alleviating the pain of his patients. He has in-office diagnostic ultrasound. The KobyGard System from OsteoMed allows Dr. Parker to treat Morton's neuroma by decompressing through a two-stitch incision without removing the nerve.

Before

After

Similar instruments are used to treat chronic heel spurs without removing the bone spur by releasing the plantar fascia, all performed in an outpatient setting with a similar minimal incision and less surgical trauma. Dr. Parker teaches other surgeons around the country and is one of the first podiatrists to utilize this state-of-the-art technique, making this procedure available to Houston patients.

MPF for heel pain

Mind procedure for neuroma

Dr. Parker is past President of the Southwest Division and fellow of the American College of Foot and Ankle Surgeons. In addition to this, he was one of the two founders of the Harris County Podiatric Residency

Program and is also a charter member of the Institute for Peripheral Nerve Surgery Fellowship Group. He served 13 years as an oral examiner of the ABPS.

He is the founder of Center for Tarsal Tunnel Syndrome and The Foot and Ankle Neuropathy Center of Texas. He is respected among his peers and has been both published in the field of podiatric medicine and served as an expert guest on numerous television programs and hosted several radio programs.
